

Elite Apartments

- Apartments
- Garden Center
- Mall
- Restaurant

How is this building eco-friendly?

It has solar panels built in the inside (not shown here) to generate electricity. Tubes run through the composted soil (from the restaurants natural trash) in the garden and through the buildings walls and plumbing, furnishing the buildings with hot water that is sanitized as it runs through your sink (by eco-friendly purifiers, of course!)

- Five Stories
- Four Apartments
- Materials: plexi-glass (strong, lets light in easily), solar panels (see note at top), flexible transparent concrete (easy to take care of, lasts long, rejects heat for California weather)
